TEST REPORT IEC/EN 60669-1

Switches for household and similar fixed-electrical installations

Part 1: General requirements IEC/EN 60669-2-1

Switches for household and similar fixed electrical installations – Part 2-1: Particular requirements – Electronic switches

Report Reference No...... 22ZCTB0517029SP

Testing Laboratory...... Shenzhen ZCT Technology Co., Ltd.

Address...... 3/F., Building 5, Hongsheng Industrial Zone, Bao'an Road, Xixiang

Street, Bao'an District, Shenzhen, Guangdong, China.

Address.....: No. 83, Fengquan Road, Tianhe street, Wenzhou Economic and

Technological Development Zone, Wenzhou City, Zhejiang

Province

Test specification:

Standard.....: EN 60669-1:2018+AC:2020

EN 60669-2-1:2004+A1:2009 +A12:2010

Test procedure....: LVD

Non-standard test method...... N/A

Test Report Form No...... IEC60669 1&IEC60669 2 1F

Test Report Form(s) Originator.....: IMQ S.p.A.

Master TRF...... Dated 2017-04

General remarks:

The test results presented in this report relate only to the object tested.

This report shall not be reproduced, except in full, without the written approval of the Issuing testing laboratory. "(see Enclosure #)" refers to additional information appended to the report.

Throughout this report a comma (point) is used as the decimal separator.

General product information:

All mode are identical only difference in model name, all tests are on model MT85301.

[&]quot;(see appended table)" refers to a table appended to the report.

Clause	Requirement + Test	Result – Remark	Verdict

8	MARKING	Ν
8.1	Switches shall be marked with	N
	rated voltage in volts;	N
	rated current in amperes or rated load in volt-amperes or watts:	N
	symbol for nature of supply;	N
	manufacturer's or responsible vendor's name, trade mark or identification mark;	Р
	type reference, which may be a catalogue number;	Р
	symbol for mini-gap construction, if applicable;	Р
	symbol for micro-gap construction, if applicable;	N
	symbol for semiconductor switching device, if applicable;	N
	first characteristic numeral for the degree of protection against access to hazardous parts and against harmful effects due to ingress of solid objects, if declared higher than 2, in which case the second characteristic numeral shall also be marked;	Р
	second characteristic numeral for the degree of protection against harmful effects due to ingress of water, if declared higher than 0, in which case the first characteristic numeral shall also be marked.	Р
	In addition, electronic switches shall be marked with	Р
	-rated frequency in hertz, unless the electronic switch is designed for both 50 Hz and 60 Hz;	Р
	-rating and type of any fuse incorporated in the electronic switch;	N
	-symbols for the kind of load (see 8.2);	Р
	-the term "extension unit", if applicable, or the relevant translation in the official language(s) of the country in which the product is to be sold, followed by the identifying reference;	Р
	-the minimum height for mounting the electronic switch shall be indicated in the installation instruction of the manufacturer if there is a restriction (see 10.1).	Р

Page 8 of 40 Report No.: 22ZCTB0517029SP

	Page 8 of 40	Report No.: 22ZCTB	031702936
	EN 60669-2-1		
Clause	Requirement + Test	Result – Remark	Verdict
	In addition, electronic switches with screwless terminals shall be marked with an indication of the suitability to accept rigid conductors only, for those electronic switches having this restriction. This information may be put on the electronic switch and/or on the packaging unit.		N
	For general purpose electronic switches with included automatic function the number of operations shall be stated in the accompanying instruction sheet when the manufacturer declares the number of operations is higher than indicated in Subclauses 19.101, 19.102 and 19.104.		N
8.3	The following marking shall be placed on the main part of the electronic switch:		Р
	the rated current or rated load, rated voltage, symbol for nature of supply, rated frequency (if required by 8.1), at least one type of load, the rating and type of any incorporated fuse (this shall be marked on the fuse-holder or in the proximity of the fuse),		Р
	either the name, trade mark or identification mark of the manufacturer or of the responsible vendor,		Р
	length of insulation to be removed before the insertion of the conductor into the screwless terminal, if any,		N
	symbol for mini-gap construction, micro-gap construction or semiconductor device, if applicable,		N
	the type reference.		Р
	Parts such as cover-plates, which are necessary for safety purposes and are intended to be sold separately, shall be marked with the manufacturer's or responsible vendor's name, trade mark or identification mark and type reference.		N
	The IP code, when applicable, shall be marked so as to be easily discernible when the switch is mounted and wired as in normal use.		N
	The marking shall be clearly visible with normal or corrected vision, without additional magnification, marked either on the front of the switch or on the inner part of its associated enclosure, or on the main part of the switch so that it is easily legible during installation. These markings shall be placed on parts which cannot be removed without the use of a tool.		Р

Add: 3/F.,Building 5, Hongsheng Industrial Zone, Bao'an Road, Xixiang Street,Bao'an District, Shenzhen, Guangdong, China.

	Page 9 of 40	Report No.: 22ZCTB05	517029SP
	EN 60669-2-1		
Clause	Requirement + Test	Result – Remark	Verdict
8.4	Terminals intended for the connection of phase conductors (supply conductors) shall be identified unless the method of connection is of no importance, is self-evident or is indicated on a wiring diagram. Such identification may take the form of a letter L or in the case of more than one of such terminals, the letters L1, L2, L3, etc. which may be accompanied by an arrow or arrows pointing to the relevant terminal or terminals.		Р
	If there are more than two terminals, the load terminal shall be marked with an arrow pointing away from the terminal or with one of the symbols mentioned in 8.2 and any other terminals shall be marked corresponding to the installation instructions.	See the instruction manual	Р
	Unless the installation of the electronic switch is made clear by the markings of the terminals, a wiring diagram shall be provided with each electronic switch.		Р
	In addition,		N
	for electronic RCS, Subclause 8.4 of IEC 60669-2-2 applies;		N
	 for electronic TDS, Subclause 8.4 of IEC 60669-2-3 applies. 		N
8.5	Terminals intended exclusively for the neutral conductor shall be indicated by the letter N.		Р
8.6	If switches of pattern numbers 2, 3, 03 and switches having a rated voltage exceeding 250 V and rated current exceeding 16 A are marked to indicate the switch position, they shall be so marked that the direction of the movement of the actuating member to its different positions or the actual switch position is clearly indicated.		N
	The off-state shall not be marked with an "O" if the circuit on the load side is considered as live, in accordance with clause 10.		N
8.6.101	It is recommended that the actual state of the electronic switch intended to control the brightness of lamps be indicated when used as intended. This can be achieved either		Р
	- with marking on the on-/off-state position, or		Р
	– with an indicator lamp, or		Р
	 by adjusting the lamp dimmer so that at the lowest control state and at rated voltage minus 10 %, the light is still visible. 		N

Page 10 of 40 Report No.: 22ZCTB0517029SP

	Page 10 of 40	Report No.: 22ZC1	B05170295P	
EN 60669-2-1				
Clause	Requirement + Test	Result – Remark	Verdict	
	When the indication of the electronic switch state is given only by the lamp, adjustment of the lamp at the lowest control state is made as specified in the following:		Р	
	or incandescent lamps, the adjustment of lamp dimmers shall be made by the manufacturer. It shall not be possible to reduce the lowest setting without a tool;		N	
	for fluorescent lamps, the adjustment of lamp dimmers shall be made by the manufacturer.		N	
	It may, however, be possible for the installer to alter the lowest setting if such an adjustment is indicated in an installation instruction.			
8.7	A push-button shall be coloured red only if it serves to open the circuit to be controlled. In addition, it may serve to close auxiliary contacts for control circuits, pilot lamps, etc.		N	
8.8	If it is necessary to take special precautions when installing the switch, details of these shall be given in an instruction sheet which accompanies the switch.		Р	
	Instruction sheets shall be written in the official language(s) of the country in which the switch is to be sold.		Р	
	If an electronic switch containing a viewing window (lens) for a sensing device is intended to be mounted at a height greater than 1,7 m, this information shall be stated in the instruction sheet.	>1,7m	Р	
8.9	Marking shall be durable and easily legible.	Marking legible.	Р	
	The marking is rubbed by hand for 15 s with a piece of cloth soaked with water and again for 15 s with a piece of cloth soaked with petroleum spirit.	Marking legible.	Р	
		1		
9	CHECKING OF DIMENSIONS		Р	
	The manufacturer of the switch shall specify in his catalogue the type of boxes (flush or surface, etc.) in which his switches are to be mounted.		Р	
	Electronic switches may be of dimensions other than those specified in the standard sheets (if any) provided they are supplied with suitable boxes.		N

Clause	Requirement + Test	Result – Remark	Verdict
10	PROTECTION AGAINST ELECTRIC SHOCK		Р
	10.1 Switches shall be so designed that when they are mounted and wired as in normal use, live parts are not accessible even after removal of parts which can be removed without the use of a tool.		Р
	The specimen is mounted as in normal use and fitted with conductors of the smallest cross- sectional area specified in clause 12; the test is repeated using conductors of the largest cross- sectional area specified in clause 12.		Р
	The standard test finger shown in figure 1 of IEC 60529 is applied in every possible position, an electrical indicator with a voltage between 40 V and 50 V being used to show contact with the relevant part.		Р
	Switches, having enclosures or covers in thermoplastic or elastomeric material, are subjected to the following additional test, which is carried out at an ambient temperature of 35 °C \pm 2 °C, the switches being at this temperature.		P
	During this additional test, the electronic switches are subjected for 1 min to a force applied through the tip of test probe 11 of IEC 61032.		Р
	This probe, with an electrical indicator as described above, is applied with a force of 75 N to all places where yielding of the insulating material could impair the safety of the electronic switch, but is applied to thin-walled knock-outs with a force of 10 N.		Р
	10.2 Knobs, operating levers, push-buttons, rockers and the like shall be of insulating material, unless their accessible metal parts are separated from the metal parts of the mechanism by double insulation or reinforced insulation, or as an alternative, they are reliably connected to earth.		N
	For electronic switches classified according to 7.1.4, first dash, accessible parts which are needed for the operation of electronic switches (for example, sensing surfaces) may be connected to live parts. If they are connected to live parts, it shall be by means of a protective impedance.		N
	The protective impedance shall consist of at least two resistors or independent capacitors in series, of the same nominal value or a combination of both. The resistors shall comply with the requirements given in 102.3, and the capacitors shall comply with the requirements given in 102.2.		N

Page 12 of 40 Report No.: 22ZCTB0517029SP

	Page 12 of 40	Report No.: 22ZCTB	0517029SP
	EN 60669-2-1		
Clause	Requirement + Test	Result – Remark	Verdict
	The removal of protective impedance shall only be possible by destruction of the electronic switch or by rendering it unusable.		N
	The measurements are carried out between either a single accessible metal part or any combination of accessible metal parts and earth, through a non-inductive resistor of 2k		Р
	at rated voltage (and rated load in on-state), in on- and off-state, and/or at lowest and highest setting values. During the measurements, each one of the resistors and all other components, if any, in the protective impedance, are alternatively short- circuited.		Р
10.101	If a cover or cover-plate, or a fuse can be removed without the use of a tool, or if the installation instructions for the user indicate that, for the purpose of maintenance, when replacing the fuse, covers and cover-plates fastened by means of a tool have to be removed, the protection against contact with live parts shall be assured even after removal of the cover or cover-plate.		Р
	This requirement does not apply when the electronic switch must be dismounted from its supporting means for the replacement of the fuse-link.		Р
10.102	If an electronic switch is provided with a hole for adjusting the setting of the electronic and this hole is indicated as such, the adjustment shall not involve the risk of an electric shock.		Р
10.103	Ventilation openings over live parts shall be so designed that a foreign body introduced into these openings shall not come into contact with any live parts with the electronic switch installed as in normal use.		N
11	PROVISION FOR EARTHING		N
11.1	Accessible metal parts, which can become live in the event of an insulation fault, shall be provided with, or permanently and reliably connected to, an earthing terminal.		N
11.2	Earthing terminals shall be terminals with screw clamping !or screwless terminals" and shall comply with the appropriate requirements of clause 12.		N

EN 60669-2-1 Requirement + Test	Result – Remark	Verdict
Requirement + Test	Result – Remark	Verdict
Surface-type switches with an enclosure of insulating material, having an IP code higher than IPX0 and more than one cable inlet, shall be provided with either an internal fixed earthing terminal or adequate space for a floating terminal allowing the connection of an incoming and outgoing conductor for the continuity of the earthing circuit.		N
The connection between the earthing terminal and accessible metal parts to be connected thereto shall be of low resistance.		N
TERMINAL S		Р
- 4	more than one cable inlet, shall be provided with either an internal fixed earthing terminal or adequate space for a floating terminal allowing the connection of an incoming and outgoing conductor for the continuity of the earthing circuit. The connection between the earthing terminal and accessible metal parts to be connected	more than one cable inlet, shall be provided with either an internal fixed earthing terminal or adequate space for a floating terminal allowing the connection of an incoming and outgoing conductor for the continuity of the earthing circuit. The connection between the earthing terminal and accessible metal parts to be connected thereto shall be of low resistance.

12	TERMINALS		Р
12.1	General		
	Switches shall be provided with terminals having screw clamping or with screwless terminals.		Р
	The means for clamping the conductors in the terminals shall not serve to fix any other component, although they may hold the terminals in place or prevent them from turning.		Р
	All the tests on terminals, with the exception of 12.3.11, shall be carried out after the test of 15.1.		Р
	Terminals having screw clamping which are in compliance with IEC 60998-2-1 can be used.		Р
	Terminals having screw clamping complying with IEC 60998-2-1 are considered to be in compliance with the requirements and tests of Subclause 12.2, except those of 12.2.6 and 12.2.7 and 12.2.8, provided they are chosen according to Table 2.		Р
12.2	Terminals with screw clamping for external copper conductors		Р
12.2.1	Switches shall be provided with terminals which shall allow the proper connection of copper conductors having cross-sectional areas as shown in table 2.		Р
12.2.2	Terminals with screw clamping shall allow the conductor to be connected without special preparation.		Р
12.2.3	Terminals with screw clamping shall have adequate mechanical strength.		Р
12.2.4	Terminals with screw clamping shall be resistant to co	rrosion.	Р

	EN 60669-2-1		
Clause	Requirement + Test	Result – Remark	Verdict
12.2.5	Screw-type terminals shall be so designed and constructed that they clamp the conductor(s) without undue damage to the conductor(s).		N
12.2.6	Terminals with screw clamping shall be so designed that they clamp the conductor reliably between metal surfaces.		N
12.2.7	Terminals with screw clamping shall be so designed or placed that neither a rigid solid conductor nor a wire of a stranded conductor can slip out while the clamping screws or nuts are tightened.		N
12.2.8	Terminals with screw clamping shall be so fixed or located within the switch that, when the clamping screws or nuts are tightened or loosened, the terminals shall not work loose from their fixing to the switch.		Р
12.2.9	Clamping screws or nuts of earthing terminals with screw clamping shall be adequately locked against accidental loosening and it shall not be possible to loosen them without the aid of a tool.		Р
12.2.10	Earthing terminals with screw clamping shall be such that there is no risk of corrosion resulting from contact between these parts and the copper of the earthing conductor, or any other metal that is in contact with these parts.		N
12.2.11	For pillar terminals, the distance between the clamping screw and the end of the conductor, when fully inserted, shall be at least that specified in figure 1.		Р
12.2.12	Lug terminals shall be used only for switches having a rated current of 40 A or greater; if such terminals are provided, they shall be fitted with spring washers or equally effective locking means.		N
12.3	Screwless terminals for external copper conductors		N
12.3.1	Screwless terminals may be of the type suitable for rigid copper conductors only or of the type suitable for both rigid and flexible copper conductors.		N
12.3.2	Screwless terminals shall be provided with clamping units which allow the proper connection of rigid or of rigid and flexible copper conductors having nominal cross-sectional areas as shown in table 7.		N
12.3.3	Screwless terminals shall allow the conductor to be connected without special preparation.		N

Add: 3/F.,Building 5, Hongsheng Industrial Zone, Bao'an Road, Xixiang Street,Bao'an District, Shenzhen, Guangdong, China.

Clause	Requirement + Test	Result – Remark	Verdict
12.3.4	Parts of screwless terminals mainly intended for carrying current shall be of materials as specified in 22.5.		N
12.3.5	Screwless terminals shall be so designed that they clamp the specified conductors with sufficient contact pressure and without undue damage to the conductor.		N
12.3.6	It shall be clear how the connection and disconnection of the conductors is to be made.		N
12.3.7	Screwless terminals which are intended to be used for the interconnection of two or more conductors shall be so designed that:		N
	during the insertion the operation of the clamping means of one of the conductors is independent of the operation of that of the other conductor(s);		N
	during the disconnecting, the conductors can be disconnected either at the same time or separately;		N
	each conductor is introduced in a separate clamping unit (not necessarily in separate holes).		N
12.3.8	Screwless terminals shall be so des		N
	Screwless terminals of switches shall be so designed that undue insertion of the conductor is prevented by a stop if further insertion is liable to reduce the creepage distances and/or clearances required in table 20, or to influence the mechanism of the switch.		N
12.3.9	Screwless terminals shall be properly fixed to the switc	h.	N
12.3.10	Screwless terminals shall withstand the mechanical stresses occurring in normal use.		N
12.3.11	Screwless terminals shall withstand the electrical and thermal stresses occurring in normal use.		N
12.3.12	Screwless terminals shall be so designed that the connected rigid solid conductor remains clamped, even when it has been deflected during normal installation, for example during mounting in a box, and the deflecting stress is transferred to the clamping unit.		N
13	CONSTRUCTIONAL REQUIREMENTS		Р
13.1	Insulating linings, barriers and the like, shall have adequate mechanical strength and shall be secured in a reliable manner.		Р

Add: 3/F.,Building 5, Hongsheng Industrial Zone, Bao'an Road, Xixiang Street,Bao'an District, Shenzhen, Guangdong, China.

Clause	Requirement + Test	Result – Remark	Verdict
13.2	Switches shall be constructed so as to permit:		Р
	easy introduction and connection of the conductors in the terminals;		Р
	correct positioning of the conductors;		Р
	easy fixing of the switch to a wall or in a box;		Р
	adequate space between the underside of the base and the surface on which the base is mounted or between the sides of the base and the enclosure (cover or box) so that, after installation of the switch, the insulation of the conductors is not necessarily pressed against live parts of different polarity or against moving parts of the mechanism, such as the spindle of a rotary switch.		Р
	Surface-type switches shall be constructed so that the fixing means do not damage the insulation of the cables during the installation.		N
13.3	Covers, cover-plates and actuating members or parts of them, which are intended to ensure protection against electric shock, shall be held in place at two or more points by effective fixing.		Р
13.3.1	For covers, cover-plates or actuating members whose fixing is of the screw-type:		Р
13.3.2	For covers, cover-plates or actuating members whose fixing is not dependent on screws and whose removal is obtained by applying a force in a direction approximately perpendicular to the mounting/supporting surface		Р
13.3.3	For covers, cover-plates or actuating members whose fixing is not dependent on screws and whose removal is obtained by using a tool, in accordance with the manufacturer's instructions given in an instruction sheet or catalogue:		N
13.4	Switches shall be so constructed that, when they are fixed and wired as in normal use, there are no free openings in their enclosures according to their IP classification.		Р
	Free openings according to 10.102 and 10.103 are accepted.		Р
13.5	Knobs of electronic switches shall be securely fixed in a reliable manner so that they will not work loose in normal use, if loosening may result in a hazard.		N
	If knobs are used to indicate the position of electronic switches, it shall not be possible to fix them in a wrong position, if this may result in a hazard.		N

Clause	Requirement + Test	Result – Remark	Verdict	
13.15.1	Membranes, lenses and the like shall be reliably fixed and shall not be displaced by the mechanical and thermal stresses occurring in normal use.		N	
13.6	Screws or other means for mounting the switch on a surface or in a box or enclosure shall be easily accessible from the front. These means shall not serve any other fixing purpose.		Р	
13.7	Combinations of switches, or of switches and socket-outlets, comprising separate bases shall be so designed that the correct position of each base is ensured. The fixing of each base shall be independent of the fixing of the combination to the mounting surface.		Р	
13.8	Accessories combined with switches shall comply with their standard, if any, unless a standard exists for the combination.		Р	
13.9	Surface-type switches that have an IP code higher than IP20 shall be according to their IP classification when fitted with conduits or with sheathed cables as for normal use.		Р	
13.10	Switches to be installed in a box shall be so designed that the conductor ends can be prepared after the box is mounted in position, but before the switch is fitted in the box.		Р	
13.11	Surface-type switches, that have an IP code higher than IPX0", of pattern numbers 1, 5 and 6 with an enclosure having more than one inlet opening shall be provided for maintaining the continuity of a second current-carrying conductor either with a fixed additional terminal complying with the requirements of clause 12 or with adequate space for a floating terminal.		N	
13.12	Inlet openings shall allow the introduction of the conduit or the sheath of the cable so as to afford complete mechanical protection.		Р	
13.13	If surface-type switches are intended for back entry from a conduit, they shall be so designed that they have provision for back entry from a conduit perpendicular to the mounting surface of the switch.		N	
13.14	If the switch is provided with membranes or the like for inlet openings they shall be replaceable.		Р	
13.15	Requirements for membranes in inlet openings		Р	
13.15.1	Membranes shall be reliably fixed and shall not be displaced by the mechanical and thermal stresses occurring in normal use.		Р

Clause	Requirement + Test	Result – Remark	Verdict
13.15.2	It is recommended that membranes be so designed and made of such material that the introduction of the cables into the switch is permitted when the ambient temperature is low.		Р
13.101	Automatic protective devices incorporated in electronic switches for lamp circuits shall have at least micro-disconnection.		Р
13.102	Electronic switches for the control of the voltage of iron core transformers for extra low- voltage incandescent lamps (for example, halogen) shall have a maximum tolerance of the phase-control angle between the positive and negative half- wave of 2°.		Р
13.103	For electronic TDS, Subclause 13.101 of IEC 60669-2-3 applies.		N

14	MECHANISM	Р
	This clause of part 1 only applies to electronic switches provided with mechanical switching devices.	N
14.1	The actuating member of a switch, when released, shall automatically take up the position corresponding to that of the moving contacts, except that for cord-operated switches and for those with a single push-button, the actuating member may take up a single rest position.	N
14.2	Switches shall be so constructed that the moving contacts can come to rest only in the "on" and "off" positions, an intermediate position being, however, permissible if it corresponds to the intermediate position of the actuating member, and if the insulation between the fixed and the moving contacts is then adequate.	N
14.3	Switches shall be so constructed that undue arcing cannot occur when the switch is operated slowly.	Р
14.4	Switches of pattern numbers 2, 3, 03 and 6/2 shall make and break all poles substantially simultaneously except that for switches of pattern number 03, the neutral shall not make after or break before the other poles.	Р

	EN 60669-2-1		
Clause	Requirement + Test	Result – Remark	Verdict
18.2	Switches are normally tested at the rated voltage and at 1,2 times the rated current.		Р
	For electronic switches whose rate of operation is limited by their application (for example, heat or light sensors), the rate of operation is as follows. The electronic switch is set to the shortest cycle time possible. The electronic switch is reactivated at the end of each cycle within a time of (2 ± 0.5) s.		Р
18.101	The contact mechanism is subjected to tests of 50 cycles of operation, each at rated voltage and at the rate of operations specified in 18.1 of part 1:		Р
	– the contact mechanism closes a circuit through which a current of $9 I_n (\cos \varphi = 0.8 \pm 0.05)$ passes, this current being interrupted by means of an auxiliary switch 50 ms to 100 ms after each closure;		Р
	– the circuit through which a current of l_n (cos $\varphi = 0.6 \pm 0.05$) passes is closed by an auxiliary switch and opened by the contact mechanism 300 ms to 500 ms after each closure.		N
	During the tests, no sustained arcing shall occur.		Р
	After these tests, the specimens shall show no damage impairing their further use.		Р
18.102	Electronic switches for control of the voltage of iron core transformers for extra lowvoltage incandescent lamps (for example, halogen) shall be subjected to the following test.		N
	The test is made on three specimens.		N
	The contact mechanism is subjected to 50 making operations, each at rated voltage and at the rate of operation as specified in 18.1 of part 1.		N
	To simulate making, the test circuit shall be adjusted to a test current 10 times the rated current of the electronic switch for one half-cycle of the power supply frequency.		N
	During the tests, no sustained arcing shall occur.		N
	After the tests, the specimens shall show no damage impairing their further use.		N
19	NORMAL OPERATION		Р
10 1	Electronic switches shall withstand, without excess	sive	Р

19	NORMAL OPERATION	Р
19.1	Electronic switches shall withstand, without excessive wear or other harmful effect, themechanical, electrical and thermal stresses occurring in normal use.	Р

Clause	Requirement + Test	Result – Remark	Verdict		
20.4	When testing the force necessary for covers, cover-plates or actuating members to come off or not come off, the switches are mounted as for normal use. Flush-type switches are fixed in appropriate mounting boxes, which are installed as for normal use so that the rims of the boxes are flush with the walls, and the covers, coverplates or actuating members are fitted. If they are provided with locking means which can be operated without the aid of a tool, these means are unlocked.		Р		
20.4.1	Verification of the non-removal of covers, cover- plates or actuating members		Р		
	Forces are gradually applied in directions perpendicular to the mounting surfaces, in such a way that the resulting force acting on the centre of the covers, cover-plates, actuating members or parts of them is respectively:		Р		
20.4.2	Verification of the removal of covers, cover- plates or actuating members		Р		
	A force not exceeding 120 N is gradually applied, in directions perpendicular to the mounting/supporting surfaces, to covers, coverplates, actuating members or parts of them by means of a hook placed in turn in each of the grooves, holes, spaces or the like, provided for removing them.		Р		
20.5	The test is made as described in 20.4, but applying, for 20.4.1, the following forces:		Р		
20.6	The test is made as described in 20.4, but applying, for 20.4.1, the force of 10 N for all covers, cover-plates, or actuating members.		Р		
20.7	The gauge shown in figure 20 is pushed toward each side of each cover, cover plate or actuating member which is fixed without screws on a mounting or supporting surface, as shown in figure 21. The face B resting on the mounting/supporting surface, with the face A perpendicular to it, the gauge is applied at right angles to each side under test.		Р		

Page 25 of 40 Report No.: 22ZCTB0517029SP

EN 60669-2-1				
Clause	Requirement + Test	Result – Remark	Verdict	
20.8	A gauge according to figure 23, applied with a force of 1 N, shall not enter more than 1,0 mm from the upper part of any groove, hole or reverse taper or the like when the gauge is applied parallel to the mounting/supporting surface and at right angles to the part under test, as shown in figure 24.		P	
20.9	The operating member of a cord-operated switch shall have adequate strength.		Р	

21	RESISTANCE TO HEAT	Р
	Switches and boxes shall be sufficiently resistant to heat.	Р
21.1	The specimens are kept for 1 h in a heating cabinet at a temperature of 100 °C ± 2 °C.	Р
21.2	Parts of insulating material necessary to retain current-carrying parts and parts of the earthing circuit in position are subjected to a ball-pressure test by means of the apparatus shown in figure 25, except the insulating parts necessary to retain the earthing terminals in a box shall be tested as specified in 21.3.	Р
21.3	Parts of insulating material not necessary to retain current-carrying parts and parts of the earthing circuit in position, even though they are in contact with them, are subjected to a ball pressure test in accordance with 21.2, but the test is made at a temperature of 70 °C ± 2 °C or 40 °C ± 2 °C plus the highest temperature rise determined for the relevant part during the test of clause 17, whichever is the higher.	Р

22	SCREWS, CURRENT CARRYING PARTS AND CONNECTIONS	
22.1	Connections, electrical or mechanical, shall withstand the mechanical stresses occurring in normal use.	N
22.2	For screws in engagement with a thread of insulating material which are operated when mounting the switch during installation, their correct introduction into the screw hole or nut shall be ensured.	N

Add: 3/F.,Building 5, Hongsheng Industrial Zone, Bao'an Road, Xixiang Street,Bao'an District, Shenzhen, Guangdong, China.

	Page 26 of 40	Report No.: 22ZCTE	30517029SP
Clause	EN 60669-2-1 Requirement + Test	Result – Remark	Verdict
22.3	Electrical connections shall be so designed that contact pressure is not transmitted through insulating material other than ceramic, pure mica or other material with characteristics no less suitable, unless there is sufficient resiliency in the metallic parts to compensate for any possible shrinkage or yielding of the insulating material.		N
22.4	Screws and rivets, which serve as electrical as well as mechanical connections, shall be locked against loosening or turning.		N
22.5	Current-carrying parts, including those of terminals (also earthing terminals), shall be of a metal having, under the conditions occurring in the equipment, mechanical strength, electrical conductivity and resistance to corrosion adequate for their intended use.		N
22.6	Contacts which are subjected to a sliding action in normal use shall be of a metal resistant to corrosion.		N
22.7	Thread-forming screws and thread-cutting screws shall not be used for the connection of current-carrying parts. Thread-forming screws and thread-cutting screws may be used to provide earthing continuity, provided that it is not necessary to disturb the connection in normal use and at least two screws are used for each connection.		N
	,		
23	Creepage distances, clearances and distances through sealing compound		N
23.1	Creepage distances, clearances and distances through sealing compound shall be not less than the values shown in table 20.		Р
23.2	Insulating compound shall not protrude above the edge of the cavity in which it is contained.		Р
23.3	Ordinary surface-type switches shall not have bare current-carrying strips at the back.		N
23.101	For electronic switches having a control circuit suitable for connection to a SELV supply, the switching circuit being supplied with a voltage greater than the SELV, creepage distances and clearances between control and switching circuits shall not be less than 5,5 mm.		P
24	RESISTANCE OF INSULATING MATERIAL TO ABNORM AND TO TRACKING	IAL HEAT, TO FIRE	Р
24.1	Resistance to abnormal heat and to fire		Р
